

Data briefing: regional variation in early diagnosis of ovarian cancer

Appendix

The table below provides a full break down of the percentage of women diagnosed with stage I or II ovarian cancer by Clinical Commissioning Group. There can be a wide variety of reasons for differences between areas, including age (with younger women more likely to be diagnosed with earlier stage ovarian cancer). Differences can also result from awareness of the symptoms among women in the general population, GP knowledge and experience and, in some cases, the time taken to diagnose ovarian cancer. Further work is required to understand what causes these differences and what can be put in place to help address them.

Stage I and II ovarian cancer diagnoses by Clinical Commissioning Group (CCG) ¹

Clinical Commissioning Group	Percentage of women diagnosed with stage I or II ovarian cancer (2012-2017) ¹³
NHS Airedale, Wharfedale and Craven CCG*	41%
NHS Ashford CCG**	38%
NHS Barking and Dagenham CCG*	54%
NHS Barnet CCG*	37%
NHS Barnsley CCG**	40%
NHS Basildon and Brentwood CCG	35%
NHS Bassetlaw CCG**	57%
NHS Bedfordshire CCG	42%
NHS Berkshire West CCG**	36%
NHS Bexley CCG	42%
NHS Birmingham and Solihull CCG	45%
NHS Blackburn with Darwen CCG**	55%
NHS Blackpool CCG*	51%
NHS Bolton CCG**	45%
NHS Bradford Districts CCG	43%
NHS Brent CCG*	41%
NHS Brighton and Hove CCG**	36%
NHS Bristol, North Somerset and South Gloucestershire CCG**	46%

*CCGs with missing levels of stage data above the national average of 14% are marked with an *. A double ** indicates that data is missing for 20 per cent or more of ovarian cancer diagnoses. In CCGs where there is a high level of missing stage data it is harder to be certain that the data provided reliably presents the breakdown of stage at diagnosis in that CCG.
